OPEN SOURCE AI NOTE-TAKING WORKSPACE

Your notes. Your knowledge. One intelligent workspace.

NoteOcean — an open-source AI-powered note-taking workspace for Hacktoberfest Hack Day Ahmedabad × Open Source Weekend 2026. Golixco.

Made with GAMMA

THE CHALLENGE

Our notes contain answers. Finding them shouldn’t be work.

- Information gets scattered across different notes and documents.
- Finding a particular fact can require manually searching multiple pages.
- Traditional note-taking tools organize information, but users still need to connect the dots themselves.

THE SHIFT

Your knowledge becomes more useful when you can ask questions about it.

Many notes

One ans

THE WORKSPACE

Meet NoteOcean.

A lightweight, Notion-inspired workspace that combines familiar writing interactions with an AI assistant grounded in your own notes.

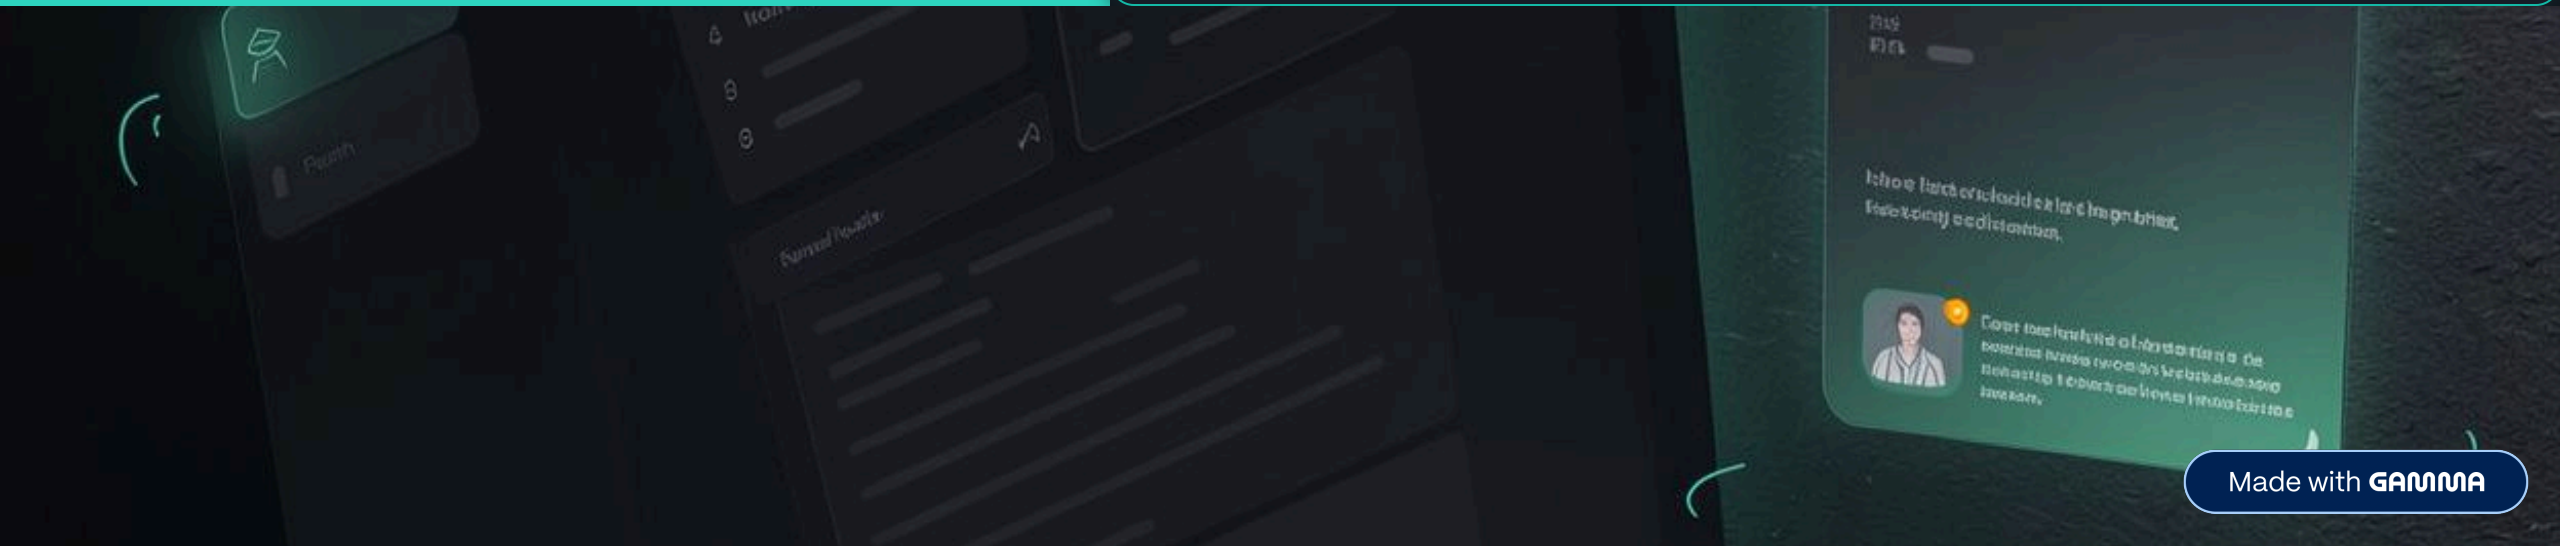

Write naturally. Find information faster. Ask your notes.

Create and organize pages instantly.

Format text while typing Markdown shortcuts.

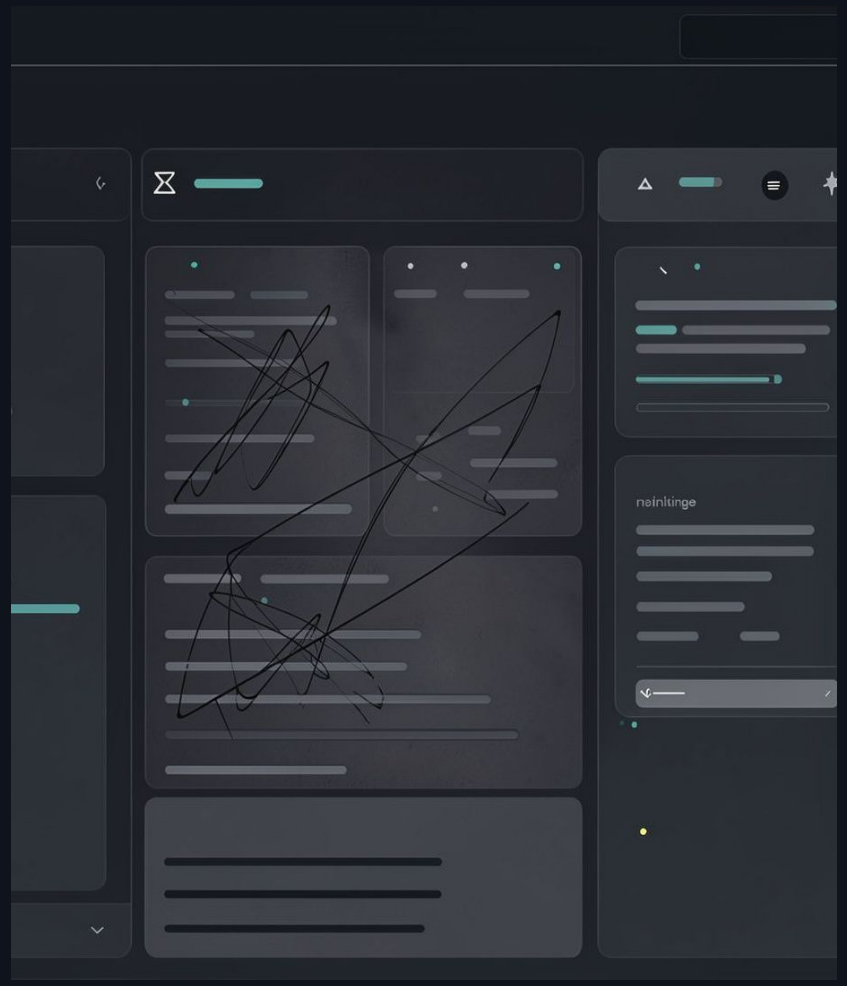

Find pages using instant title search.

Ask questions about saved notes using an open-weight AI model.

Made with GAMMA

Writing should feel natural.

1. Type # to create a heading.
2. Type /code to open the slash-command menu and insert an editable code block.
3. Search pages with Ctrl + K and navigate instantly.

- Page creation and title editing.
- Bulleted and numbered lists, quotes, and dividers.
- Automatic saving in browser storage.

Made with GAMMA

FROM SEARCH TO ANSWERS

From searching pages to asking questions.

QUESTION	RETRIEVED NOTE	AI ANSWER
“Where does Rohan live?”	“Rohan lives in Gota.”	**“Rohan lives in Gota.”**

01

Search relevant saved note content.

02

Pass selected context to the AI backend.

03

Generate an answer grounded in that context.

04

Display source references and say when the answer isn't found in the notes.

Made with GAMMA

AI ARCHITECTURE

Open-weight AI, grounded in your own knowledge.

Retrieval selects relevant information from saved notes. Generation uses that context to answer naturally.

01 User question

02 Local note retrieval

03 Relevant note snippets

04 Next.js server-side API

05 Backboard API

06 Configured Gemma-family model

07 Grounded answer with source references

The API key stays on the server, and source metadata is validated by the application.

Made with GAMMA

SYSTEM DESIGN

A lightweight architecture. Fewer moving parts.

No account or login required.

Notes persist in browser localStorage.

No separate database service in the MVP.

Next.js serves the application and server-side AI endpoint.

Backboard provides the AI integration.

Only relevant retrieved note content is sent when a user submits a question.

Limitations: browser-local notes do not synchronize across devices, and relevant note excerpts are sent to the configured AI provider.

Made with GAMMA

Built with tools developers can inspect and extend.

Next.js

application framework.

TypeScript

application type safety.

Tailwind CSS

styling.

Tiptap / ProseMirror

rich-text editing.

localStorage

local note persistence.

Backboard

AI API integration.

Gemma-family open-weight model

answer generation.

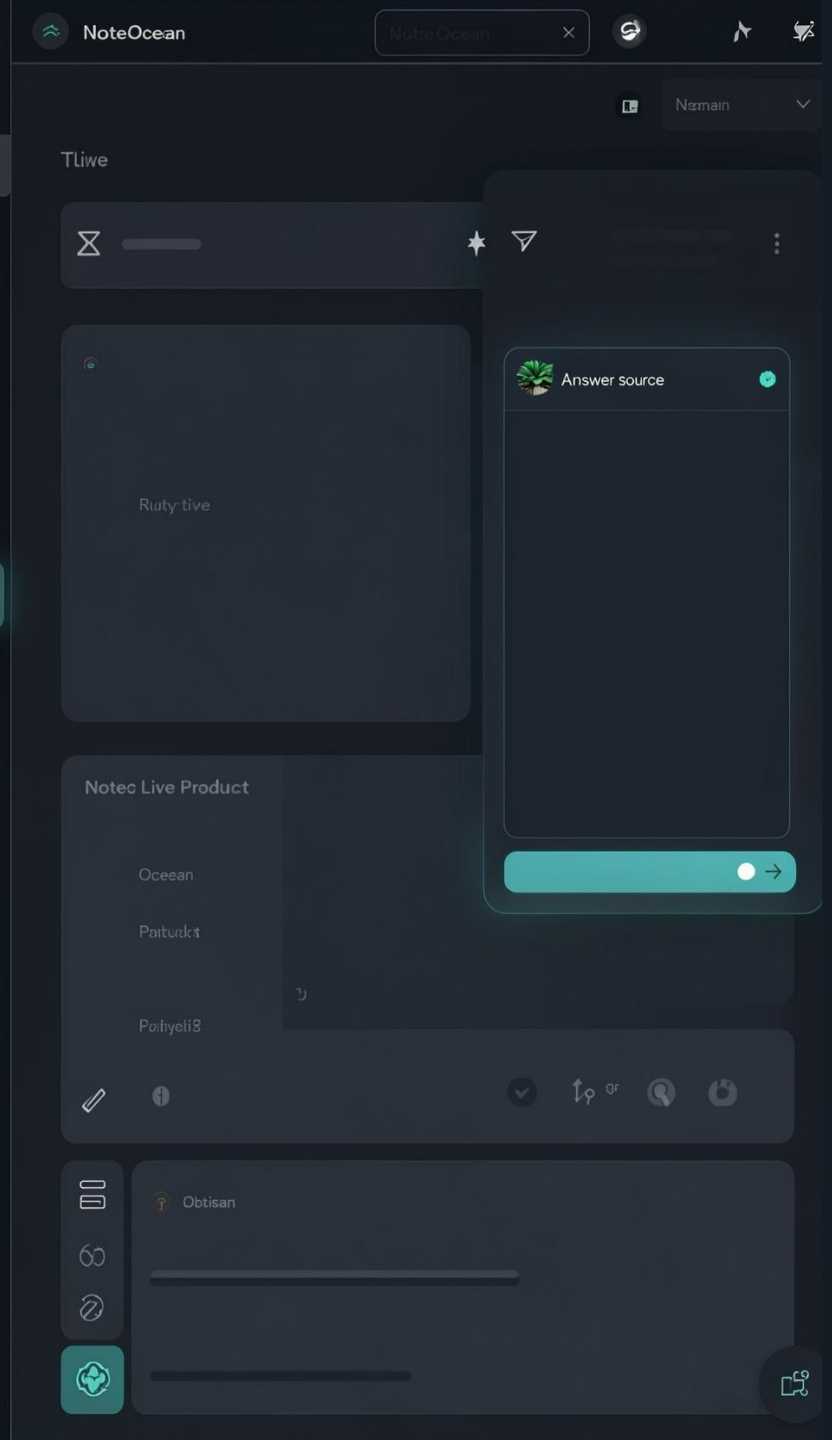

DigitalOcean App Platform

deployment.

Open source under the MIT license. Developers can inspect and modify the application, reconfigure the model, and evolve the product without a proprietary note-storage platform.

Made with GAMMA

LIVE DEMO

Built, deployed, and ready to explore.

Live demo: https://noteocean-l222m.ondigitalocean.app/

GitHub: https://github.com/Golixco/NoteOcean

Hosting: DigitalOcean App Platform.

1. Create a note.
2. Use a Markdown shortcut.
3. Find the note with search.
4. Ask NoteOcean Bot a question.
5. Verify the response and source reference.

Made with GAMMA

THE VISION

A small start. A bigger vision for personal knowledge.

NoteOcean — Make your notes think with you.

GitHub: https://github.com/Golixco/NoteOcean · Demo: https://noteocean-l222m.ondigitalocean.app/

CURRENT MVP

- Page creation and editing.
- Real-time Markdown formatting.
- Slash commands and code blocks.
- Page title search.
- Browser-local persistence.
- AI question answering with source references.
- DigitalOcean deployment.

FUTURE ENHANCEMENTS

- Speech-to-text dictation.
- Improved full-text and semantic retrieval.
- Optional cloud synchronization.
- Export and import.
- More powerful AI workflows.
